TODAY FOR TOMORROW

BEAUTIFUL PROSPECTS FOR YOU
AND THE ENVIRONMENT

Kömmerling 76 AddOn
double seal

PROTECT THE ENVIRONMENT AND YOUR PRIVATE QUARTERS

Kömmerling 76 AddOn double seal

More sustainability, more comfort – that's what the Kömmerling 76 AddOn double seal variant stands for. Because an additional pane decisively improves the thermal and sound insulation values of your windows and doors, and even provides the basis for the integration of effective shutter systems and sunshade.

OPTIMAL THERMAL AND SOUND INSULATION

The extra pane reinforces the thermally insulating properties of the windows and doors and also protects against noise. The result: You consume less energy, reduce heating costs and CO₂ emissions and create a feel-good atmosphere within your own four walls.

EXCELLENT SHUTTER SYSTEMS AND SUNSHADE

Do you love your private quarters and want a shady spot when the temperatures rise outside? Even then, the Kömmerling 76 AddOn double seal is the ideal solution. If desired, a louver can be integrated to protect against prying eyes and too much solar irradiation. As these shutter systems and this sunshade are located between two glass panes, they are also unaffected by the weather. User-friendly: The louver can be operated manually or electrically.

- Increased sound and thermal insulation due to additional glass pane
- Eco friendly, as energy consumption and greenhouse gas emissions are reduced
- Use of recycled materials and PVC with green stabilisers
- Shutter systems and sunshade can be optionally integrated with an internal louver
- Cost-effective, long-lived and robust
- Can be used on PVC-U windows with aluminium cladding
- Easy to retrofit, therefore perfect for renovations
